

To whom it may concern,

Re: Public consultation on the draft Climate Change Assessment Requirements and draft Guide for Large Emitters 2024

We would like to reiterate our support for the comments in the ASBG Submission on Climate Change submitted in 2022 for the 2024 public consultation. Please find this document attached again, following submission in the 2022 submission.

We would like to reiterate points made in this submission related to the importance of local manufacturing.

As one of Australia's leading manufacturer of building products, we have a well-developed sustainability strategy "Build for Living: Towards 2025". Brickworks also has an advanced understanding of greenhouse gas reporting through NGERS, as well as reporting against the Taskforce for Climate-related Financial Disclosure since 2022. Brickworks has just celebrated the 10 year anniversary of our Climate Active Carbon Neutral bricks.

More information on Brickworks' sustainability strategy can be found here:

<https://www.brickworks.com.au/sustainability/>

We would like to reiterate points made in this submission related to the importance of aligning Federal and State requirements.

Kind regards,
Emily

Emily Antonio
