Thank you for the opportunity to contribute to this important policy.

The NSW EPA climate change policy has no actions to address the impacts of Transport (except that it's the fastest growing and second largest source of emissions).

Relying on EVs is not good enough. Reducing car use is missing from all the other climate change policies and strategies. Transport for NSW continues to build more motorway projects that will induce demand for car travel and increase emissions.

If taking action to significantly reduce emissions from transport is not part of the EPA's remit it should be. Industry and government need to be held account and take responsibility and real action to address the climate crisis and influence widespread behavior change.

Please let's do better than to allow increasing transport emissions!

Thank you,

Beth Robrahn
